

## An Unsustainable Status Quo

We All Bear the Burdens of an Underfunded System

March 2025

## **SOUTH DAKOTA**

The problems are clear: The structural challenges that have always plagued the child care sector are growing. Program costs are rising, staff burnout and turnover is increasing, and absent sufficient public support, families are having to pay more than they can afford for the child care they need. As a result, the supply of high-quality child care everyone in our society needs to be successful cannot match the demand for it.

The solutions remain clear: Public investments in child care and early learning are needed to build a system that works, and that ensures early childhood educators are supported in joining and remaining part of the early childhood education (ECE) profession, and that parents are able to access and afford high-quality care that meets their needs and the needs of their children.

In January 2025, more than 10,000 early childhood educators from all states and settings - including centers, family child care homes, faith-based programs, Head Start, and public preschool programs - responded to a new ECE field survey from NAEYC. The survey results and accompanying stories illustrate the ongoing challenges facing the field, the ways those challenges impact both families and providers, and the need for additional and ongoing public investment in this sector.

## Here are some reflections from survey respondents in South Dakota:

"The child care field is in crisis. It is becoming increasingly difficult to find professional people who want to continue in this line of work. I hope we are able to find a way to reduce burnout, increase wages, and continue to give people in this field support in multiple avenues." - Coach/Professional Development

"It is incredibly challenging to be a sounding board, counselor, financial advisor, boss and friend to my staff" - Director/Administrator

"My program offers free therapy services twice a week for those teachers who really need it and they cover for you in your classroom." - Early Childhood Educator

"I can not support my family and have borrowed on my home and credit cards to pay for food and to keep my daycare running. I can not get enough children to cover my costs. I am losing money. I have no retirement, health, dental or vision insurance, no paid sick and personal time off and I work 70 hours a week in family child care." - Family Child Care Owner/Operator

## Here's a brief summary of the survey data from South Dakota:

Methodology This online survey, created and conducted by NAEYC using SurveyMonkey, represents the responses of a non-randomized sample of 10,066 individuals working in early childhood education settings who completed the survey in English or Spanish between January 6-27, 2025. To generate a more representative national sample from the pool of responses, a probability proportional to size (PPS) methodology was used to pull samples by state that are benchmarked to the share of the total early childhood workforce by state. The authors relied upon the methodology employed by the CSCCE's Early Childhood Workforce Index estimates of the size of each state's ECE workforce using U.S. Census Bureau ACS data (https://cscce.berkeley.edu/wp-content/uploads/2024/11/Appendix-Table-2.1\_2024-Index.pdf). The final sample size for analysis is 9,883. In contrast, for the state-level analysis, the entire sample of responses from each state were used. We are unable to supply detailed analysis in states for which there are very small sample sizes across sub-groups.

The survey links were shared widely through email newsletters, listservs, social media, and via partnerships, and 10 randomly selected respondents were provided with a \$100 gift card for participation in a sweepstakes. Given the constantly changing and widely varying nature of the crisis, the broad analysis from this survey is intended to present the experiences of the respondents, as captured in the moment that they take the survey, with extrapolations for the experiences of the field and industry at large. Additional information available at www.naeyc.org/pandemic-surveys.

1. Note that due to the small state-level sample of directors responding to the survey, state-specific data is not reported alongside the national data in those places.
